Subject: hope is alive

Good afternoon Amanda, we just found this so we are hopeful due to the precedent set in NJ and approved by the EPA earlier this year.

Fun fact, I was at the CMC facility in Mesa, AZ yesterday. They have been making a continuous billet since 2013. It can stretch from Phoenix to London and back 10 times!!!! Photos were not allowed, otherwise I would have attached one. It was really cool.

Subject: RE: data from the EPA

Hello All,

I was looking into the possibility of getting a facility-specific emission limit (FSEL) through the state of New Jersey and found some precedent. One of which was CMC Steel was approved in February of this year to have a FSEL of 57 lbs VOC/hr. See below. They already had this permit limit, but it shows it is possible to get approval.

Table 11-4 (continued): Status of NO_x and VOC Source-Specific RACT Determinations

Source	Type of Emissions Limits	Approval Status	Does NJ anticipate submitting SIP revision?
6. CMC Steel NJ (Formerly Gerdau Ameristeel Corp of Sayreville) Middlesex County (PI#18052, PSP140001, electric arc furnace and billet reheat furnace) BOP150002	VOC FSEL NO _x FSEL	VOC FSEL NJDEP approved 4/30/2019. Submitted to EPA 6/6/2019. EPA approved 2/17/2021. NO _x FSEL NJDEP approved 3/27/2018 EPA approved 5/30/2019 (c)	No

CMC Steel New Jersey submitted this source-specific SIP revision requesting authorization to continue to operate under its current approved emission limits—specifically, the VOC emission rate of 57 pounds per hour (lb/hr) and the NO_x emission rate of 31 lb/hr—for the Sayreville EAF. A full summary of EPA's

Thank you,

Good morning all, Thaddeus worked through the data from the EPA and this is what he saw. It is not anywhere close to the factors EPA floated out there verbally on the last two calls.
